## HANDLING AND RECOMMENDED TOOLS ON SITE

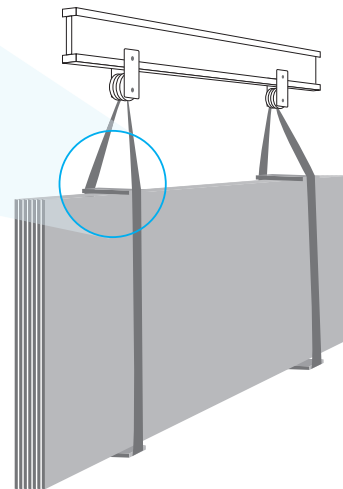

FIGURE 2

Cases (or stands) must be lifted from the long side by placing 2.5 m long forks under them. Slabs must be vertically handled and, in case of bridges, the slinging must be made using hemp cloth (steel chains are not recommended) to prevent any breakage and/or chipping. In case of storage on metal stands, the latter should be coated (wood or rubber).

For multiple grabs, the use of a lifting beam is advised, with canvas straps spaced out on the base and on the top by a wooden spacer slightly longer than the slab pack (as shown in figure 2). In this way the tension generated during handling is not applied to the slabs, avoiding the breakage of the material. Warning: always check the maximum load.

NON SOVRAPPORRE MAI VOLUMI DIVERSI, PER EVITARE ROTTURE  
TO AVOID BREAKAGE, NEVER STACK DIFFERENT VOLUMES

Use of the aluminium kits specially designed for the slabs is recommended for handling. The kits, with suckers, limit torsion and permit transport (always vertical) both manually and on forklift. 4 people are required for manual handling, handling vertically from the long side.

# CLEANING, MAINTENANCE AND CARE

## DAILY CLEANING

For daily cleaning, warm water and possibly a household detergent are recommended. Wipe clean with a damp cloth soaked in regular detergent and water. To avoid polished surface from scratching when cleaning, only use cloth made of soft fibers, suitable for cleaning of glass, kitchen appliance.

The following are recommended for heavier dirt:

- Acid: acid detergents, de-fouling cleaners, cement remover e.g. Viakal
- Alkali: basic, ammonia, degreasing detergent e.g. Chante Clair, Cif
- Solvent: universal solvent, thinner, turpentine, white spirit, alcohol
- Oxidant: bleach, hydrogen peroxide

After use, always rinse well with plenty of water.

## GUIDE TO REPAIR

Very small chipping can be repaired. Expert hands can restore very small chipping with epoxy resins, even though it is not easy to find the right tones and restore the original surface. Once the chipping is repaired, remove the excess resin with a cloth soaked in acetone before it hardens. Once it has hardened, work the resin by hand to make the surface uniform.

## GUIDE TO REMOVE WATERMARK

When water contains significant amounts of dissolved calcium, magnesium, or other minerals, hard water can be remained on countertops. When these minerals mix with soap, a chemical reaction occurs, leaving behind filmy soap scum. Over time, deposits can turn into a scaly mineral buildup on surfaces and dulls the shiny countertops.

Homeowners need to follow up with a rinse to remove any traces of soap scum that could dull the surface. After wiping, they also need to dry the surface. Standing water can leave mineral deposits behind that are hard to remove, so wipe up spills immediately and dry the surface with a microfiber cloth to soak up all the water.

## Detergents for the different types of Dirt

TYPE OF DIRT	TYPE OF DETERGENT
Beer, wine, coffee	Sodium hypochlorite (bleach) in solution or alkaline detergent
Ice cream	Sodium hypochlorite (bleach) in diluted solution
Tyre rubber	Organic solvent (trichloroethylene)
Greases and oil	Alkali-based detergent
Inks	Sodium hypochlorite (bleach) in solution or alkaline detergent
Indelible felt-tip pen	Organic solvent (trichloroethylene acetone)
Resins	Organic solvent (turpentine, white spirit, thinner)
Lines from aluminium	Acid detergent or abrasive cream/powder detergent
Rust	Acid-based detergent
Fruit juices	Sodium hypochlorite (bleach) in diluted solution
Other stains	Abrasive cream detergent
